

## Foreword

This book contains the results of traffic counts and analysis conducted by the Traffic Engineering and Road Safety Section of the Nova Scotia Department of Public Works since 2013. All available count information from 2013 to 2022 is included for the following highways:

- ❖ 100 Series Highways.
- ❖ 1 to 99 Series Trunks.
- ❖ 200 and 300 Series Routes.

Traffic count data done before 2013 is available upon request.

**Note:**

**Traffic data (ADT, AADT, and %TRK) for 2020 may have been affected by the pandemic (COVID).**

Please direct any comments or inquires concerning this publication to:

This publication is available on the Nova Scotia Department of Public Works **Intranet** and **Internet** sites. Digital copies (PDF) are available upon request.

## Introduction

An explanation of abbreviated terms used in this book.

### Types of counts and analysis:

**TC - Traffic Count.** This type of count is **volume only** conducted with a portable traffic counter connected either to a single road tube (counts each vehicle's axles and divides by two) or to in pavement loops (counts vehicles passing over them by detecting a magnetic field). These counts are one week in duration.

**Note:** Tube counts may be slightly higher than loops due to vehicles with more than two axles being counted as more than one vehicle.

**VC - Vehicle Classification.** This type of count is conducted with a portable traffic counter connected either to road tubes (two parallel classifying by the number of axles per vehicle) or to in pavement loops (two parallel classifying by the length of each vehicle). Both types count and classify vehicles. These counts are one week in duration.

**Permanent** - Count sites using in pavement loops (two parallel) to collect volume, length classification, and speed data. Permanent sites that additionally have in pavement piezo electric sensors include volume, length and axle classification, speed, as well as weights of vehicles. All permanent count sites provide year round data. There are currently 34 **Permanent** sites, including 6 **WIM** (Weigh-in-Motion) sites across the province.

**Radar**- This type of count is conducted with a radar and includes volume, speed, and classification by length.

**TM - Turning Movement.** These represent the various approach movements (left, thru, right) that pass through an intersection over a given period of time. They are collected for a variety of purposes at signalized and unsignalized intersections. **A Turning Movement count may be used to conduct a Signal Warrant Analysis, Left/Right Turn Lane Warrant Analysis and Capacity Analysis.**

**SA - Signal Analysis.** Driven by **PP (Priority Points at or near 100)**. Signal Analysis Points based on 2014 TAC (Transportation Association of Canada) Traffic Signal Warrant Matrix Procedure (2005).

**LT**- Left Turn Lane warrant nomographs within the Geometric Design Standards for Ontario Highways.

**RT** - Right Turn Lane warrant nomographs prescribed by the Ohio Department of Transportation.

## Other Abbreviations:

**ADT - Average Daily Traffic.** The average number of vehicles passing the count location in a 24 hour period based on a temporary count.

**AADT - Annual Average Daily Traffic.** The average number of vehicles passing the count location in a 24 hour period, averaged on the basis of one year. AADT's are determined in two ways:

1. From actual year long counts.
2. By estimation from a temporary count, using seasonal and group expansion factors.

**GRP-Group** .The ADT at a particular location will vary due to seasonal and other influences. Count locations are "grouped" according to their seasonal variation patterns. Appropriate factors for estimating the AADT from a short count vary between groups. Group "AA" counts have the least seasonal variation while Group "H" have the greatest.

**85 %**- This is the **speed** at which 85% of the vehicles are traveling at, or below. The 85% of vehicle speeds are based on all vehicles and may not represent free flow conditions.

**%TRK**- Truck percentage of AADT.

**DIR**- The direction vehicles are traveling (if the direction is not stated, the count is a two-way volume).

**Inter/s**- Intersection.

**Inter/c** - Interchange.

### Note:

- ❖ The Cabot Trail is referred to as Trunk 30.
- ❖ Dunbrack St is referred to as Trunk 32.
- ❖ Bedford Bypass is referred to as Trunk 33.
